

# Lisandro Fernando

Software Development Engineer in Test • Devops Engineer

+528180546960 | lisandrusfernandus@hotmail.com | Mexico, Monterrey, N.L

----- PROFESSIONAL SUMMARY -----

Accomplished Software Automation Engineering Professional with 8+ years of experience using Selenium, Java, Maven, TestNG, Cucumber, Playwright, Python, Pytest, Robot Framework, Rest Assured, Postman, MuleSoft, AI tools such as ChatGPT, Gemini, MagnifyAi. Amazon Q, AI integrations, Knowledge of GitHub, CI/CD integration with Jenkins, Jira Management board, Agile frameworks like Scrum and Kanban. I have passion to learn new technologies, team oriented technical leader, I'm focused on improving and developing my professional background.

----- AREAS OF EXPERTISE -----

**Professional Skills**

- Leadership
- Management
- Communication
- Scrum
- Agile Management
- Kanban Management
- Jira Management
- Qtest Management

**Technical Skills**

- Java
- JavaScript
- Python
- CI/CD
- AWS
- Object Orientation
- Git
- Rest Assured
- Bash Scripting
- Selenium
- Cucumber
- Python
- Postman
- Maven
- TestNG
- TestCafe
- MuleSoft Testing
- Jenkins
- WebDriverIO
- Unit Testing
- SQL Databases
- Playwright
- Linux
- Splunk
- JMeter
- Generative AI
- Azure Devops

---

## PROFESSIONAL EXPERIENCE

---

### **Accenture | August 2025– Current**

#### **Automation Specialist**

- Executed API backend integration tests with Postman, SQL Server database, UI validating the responses both UI and API for a financial application
- Developed agent ai application with python integrated with application which solved 90% of the query's improving team delivery by 90%.
- Developed a Robot Framework with python, with automation scripts validating API integration tests and UI for telecommunication products reducing manual regression by 90%.
- Implemented Robot Automation tests increasing test coverage by 85% and minimizing report and observability time by 88%.
- Run Cucumber automated tests framework for an enterprise financial application validating API payload for the expected calculation values.
- Latest Test feature development, Devops infrastructure implementation AWS, Azure Devops is been implemented with Amazon Q AI agent in all the projects.

### **MindBox Trainings | April 2025– August 2025**

#### **Devops practices Project**

- Implemented a pipeline with java spring boot application hosted in AWS EC2 server with SonarQube to review the code quality, and checked with trivy to scan vulnerabilities improving 70% in code reliability.
- Created a customized docker files pushed to docker registry for image reusability
- Run the application pipeline on a selfhosted server, with trivy security checks and SonarQube leading scalability and deployment efficiency.

### **Globant | November 2023 – March 2025**

#### **Senior Test Engineer level 1**

- Developed automated test cases using Java, Rest Assured, Cucumber, Karate framework, Git, CI/CD, for component tests and e2e tests resulting in 100% automated tests coverage, 100% defect resolution, 100% reduction in testing time, reaching an automation maturity level 4 with 7ps implementation.
- Developed a maven framework from scratch, with implementation of Java, Karate, maven, cucumber dependencies, which led a 100% reduction in test execution time and a 100% in test automation efficiency reaching an automation maturity level 4 with 7ps implementation.
- Proficiently conducted application debugging and leveraged Splunk for data analysis, leading to 80% reduction in issue resolution time and a 90% increase in the identification of critical system issues.
- Maintained up-to-date Jira software management tool, by consistently updating test execution status and providing conclusive evidence, resulting in an 88% increase in project visibility, better decision making, and a 95% reduction in communication overhead.
- Maintained consistent communication with the client and development architect to address defects

and devise improved testing solutions, resulting in a 90% decrease in unresolved issues and 95% reduction in post-release defects reaching an automation maturity level 4 with 7ps implementation.

- Implemented automation framework with Playwright, Cypress, for frontend tests, API tests, and unit tests with Jest framework resulting in 100% test coverage with JS tech stack, and 100% automated tests without any human intervention reaching an automation maturity level 4 with 7ps implementation.
- Standardized test execution with Typescript, Playwright as main tech stacks for multiple API applications which increased test coverage 85% and improved test flakiness by 90% reaching an automation maturity level 4 with 7ps implementation.
- Developed framework an Automation in Typescript and Playwright for refactoring legacy applications in different tech stack, which improved test coverage, reports and response time by 95% reaching an automation maturity level 4 with 7ps implementation.
- Developed an Automation framework with python, behave which improved testing legacy apps in data science and analysis improving test coverage by 90%, and reducing manual test efforts by 70% reaching an automation maturity level 4 with 7ps implementation.
- Developed a framework with Playwright Typescript for Salesforce API testing, eliminated manual testing efforts by 80%, and improved testing regression testing and smoke tests by 90%.
- Collaborated with developers to resolve bugs, incorporating security testing protocols and cross-site testing to prevent unauthorized access and ensure compliance with OWASP standards
- Performed in-depth security testing, focusing on cross-site scripting (XSS) and CSRF vulnerabilities, resulting in a hardened application deployed with zero critical issues.

#### **Innova Solutions | March 2023 – September 2023.**

##### **Principal Software Developer Engineer in Test**

- Performed API testing for a newly developed telecommunications app using Postman, leading 30% increase of testing coverage, and 20% defect reduction
- Utilized Selenium, Java, Maven, and TestNG framework to conduct front-end testing of a Sales UI application, resulting in a 25% increase in test coverage and 30% reduction in the number of UI-related defects
- Proficiently conducted application debugging and effectively utilized Kibana for data log analysis, resulting in a 25% reduction in issue resolution time and a 20% increase in the identification of critical system issues
- Regularly updated the software management tool, Qtest, with test execution status, leading to a 20% increase in project visibility and 15% improvement in decision-making efficiency
- Performed Integration tests with API postman calls and Cassandra database improving scalability of the application data by 75%.
- Provided regular reports to the client, including current execution status, metrics and traceability matrix of the project, resulting in a 20% increase in client confidence and 15% reduction in client inquiries
- Collaborated with stake holders and senior managers for efficient resource allocation, leading to a full allocation of all team members
- Effectively led a team of 5 QA engineers, gathering and consolidating their daily status reports,

resulting in 20% increase in team productivity and a 15% reduction in reporting time.

- Efficiently delegated test execution tasks to the team and produced comprehensive reports for presentation to the delivery manager, resulting in a 25% increase in test execution efficiency and a 20% reduction in reporting turnaround time.
- Regularly tracked and monitored the team's daily activities and progress, resulting in a 15% increase in task completion efficiency and a 20% reduction in potential delays.
- Proactively developed and provided data support to other teams for their development and testing efforts, resulting in a 30% reduction in data-related issues and a 25% improvement in inter-team collaboration.
- Performed test scripts execution using python and robot Framework, including smoke tests, sanity tests and regression tests, resulting in 40% reduction of manual efforts and a 15% improvement in overall efficiency.
- Engaged in leadership and management activities, including task delegation, task coordination, and effective communication, leading to a 25% increase in team productivity and 20% reduction in task completion.

## **Globant | January 2022 – March 2023.**

### **Senior Test Engineer level 1**

- Led the end-to-end testing process, including gathering application requirements, creating comprehensive test plans, overseeing test development, and executing tests, resulting in a 30% reduction in critical defects and 20% increase in test coverage.
- Proficiently conducted application debugging and leveraged Splunk for data analysis, leading to 25% reduction in issue resolution time and a 20% increase in the identification of critical system issues.
- Maintained up-to-date software management tool, Jira, by consistently updating test execution status and providing conclusive evidence, resulting in a 15% increase in project visibility, better decision making, and a 20% reduction in communication overhead.
- Conducted a comprehensive knowledge transfer to the client on business functionality and test execution, covering key details, resulting in a 30% reduction in client queries and a 20% increase in client satisfaction.
- Delivered weekly reports to the client, ensuring that the functionality consistently met their needs, resulting in a 15% improvement in client confidence and a 20% reduction in unexpected issues.
- Maintained consistent communication with the client and development architect to address defects and devise improved testing solutions, resulting in a 30% decrease in unresolved issues and 25% reduction in post-release defects
- Consistently provided to the client the test case matrix, including all test statuses and related evidence, on a regular basis, resulting in a 20% increase in client transparency and 15% reduction in client follow up queries

## **Nagarro| January 2021 – January 2022.**

### **Stuff Engineer**

- Developed automation Integration and E2E tests with typescript and testcafe, and webdriverIO resulting in 60% test coverage.
- Built automation tests for react app, story book, which led to a 25% reduction in bug reports and 20% increase in testing efficiency.
- Implemented BDD with typescript, resulting in a 15% increase in collaboration among team members, a 20% reduction in miscommunication, and a 25% improvement in software quality.
- Executed regression tests on browser stack with live devices, which led to a 30% reduction in post-release defects and a 20% increase in cross-browser compatibility.
- Provided guidance to developers, resulting in a 50% increase in their understanding of automation testing and a 30% improvement in their ability to independently develop automation tests.
- Wrote test cases for developers to achieve full quality contributing on their understanding of positive and negative scenarios resulting in 20% reduction in post-release defects and achieve 90% pass rate in quality assurance assessments.
- Planned tests by reviewing Epics and Features, resulting in a 15% increase in the overall quality of the user stories, and a 20% reduction in rework by proactively addressing challenges and clarifying requirements
- Reviewed the product defect backlog, systematically verified and reproduced defects resulting in a 20% increase in the rate of defect resolution and a 15% reduction in unresolved issues, thereby enhancing the overall product quality.
- Coordinated the development team to establish a standardized approach for automation testing, leading to a 25% reduction in test script development time and 20% increase in testing consistency across projects.
- Stablished test execution with Typescript, Playwright, testCafe, WebDriverIO as main tech stacks for multiple applications which increased test coverage 85% and avoided test flakiness by 90%.

## **Hexaware| January 2020 – January 2021.**

### **QA Engineer**

- Developed a maven framework from scratch, with implementation of selenium, java, TestNG, maven, cucumber dependencies, which led an 80% reduction in test execution time and a 70% in test automation efficiency.
- Created scripts for salesforce application to reduce manual testing efforts.
- Implemented java, selenium, TestNG, cucumber, extent reports, CI/CD resulting in an 80% improvement in test suite reliability and better metrics analysis of test execution.
- Produced API test cases using Rest Assured and Cucumber framework leading 80% of test coverage, and covering scenarios understandable to every team member.
- Performed data base testing, identifying and resolving 95% of data inconsistencies and contributing to a 30% reduction in data-related errors.
- Engineered a Pytest automation framework with python and selenium integration, resulting in 75% reduction of manual tests efforts.
- Implemented selenium robot automation scripts to handle keyboard operations in certain test cases,

leading to 50% reduction in manual keystrokes.

- Executed 10 scripts per day API testing integrated with MuleSoft platform, increasing 45% coverage in related scenarios.

## **Accenture | April 2018 – December 2019**

### **QA Engineer**

- Participated in the Telus project, a Canadian telecommunication company, where I worked with a maven project, selenium, java, TestNG, cucumber, and I developed a karate framework to test web services, resulting in a 30% improvement in test coverage and a 25% reduction testing time.
- Joined Disney Digital project where I worked with maven project, selenium, java, TestNG, cucumber and I had to fix three scripts per day in an agile environment.
- Implemented an agile approach to the Disney MSLT Refactoring project, collaborating with cross-functional teams to refactor a maven project, utilizing selenium, Java, TestNG, and CI/CD integration with Jenkins. Increased test coverage by 25% and achieved 20% faster release cycles.
- Attended daily scrum meetings, with planned weekly sprints of 15 scripts that must had been fixed every week.

---

## **EDUCATION**

---

### **Master's Degree in Science and Engineering, Prairie View A&M University**

*Area of Expertise: Mechanical Design and Software Engineering Technology. 2016 – 2017*

### **Bachelor's degree in Automation Engineering, Tianjin University and Science and Technology.**

*Area of Expertise: Automation Software Engineering Technology. 2009 – 2013*

### **Specialized Training**

- Accenture, Quality Automation Engineering - 2018

### **Languages**

- Spanish Professional
- English Professional
- Portuguese Native
- Chinese Intermediate
